A Vial for your Youth.

Exosomes help your cells maintain their vitality, resulting in a visibly more youthful and radiant look.

What is ADMSCs-EXOs?

Exosomes from Adipose-Derived Mesenchymal Stem Cells offer a promising and safe approach due to higher biocompatibility and accessibility. These exosomes have the ability to circulate in the body for extended periods with higher penetration ability. In combination, they promote strengthening the activity of fibroblasts.

**Fibroblasts represent the major skin type in the dermis, where they have a key role in producing and maintaining the extracellular connective tissue that is crucial to maintaining the youthful appearance of skin.*
